

Table of Contents

Display Window 3

Display Window

The display window can be displayed on a beamer, big TV or any other display hardware. At the first program start it contains 6 layers which can be switched in the main window.

- match
- break
- pictures
- scores
- schedule
- events
- addition layers can be defined in the program

match mode:

This window contains no direct user controls.

The only exception are tables which are too long for the screen. In this case it is possible to scroll such a table manually with the mouse.

edit mode:

In edit mode a grid will be displayed here. This grid helps to setup display objects. The selected object will get a border and 3 drag&drop points.
