Tab Remote

Here you can start a server. This sever allows to provide the display to remote displays on other PCs and to revice remote controls from the remote control app which runs on other PCs or an Windows tablet.

Together with the software two other programmes are installed:

freeScoreBoard**RC** - the remote control app (yellow icon)

freeScoreBoard**RD** - the remote display app (blue icon)

If you want to use the remote apps on another PCs, just install the package and use these two programs.

Port:

The network TCP/IP port which should be used for communication.

Clients:

Here all clints are listed which does have a remote display running.

click Clients

Here you can cick clints running the remote display.

Info:

Status messages are listed here.

Delete:

Is cleaning the info box.
