Remotedisplay Client 3

Remotedisplay Client

This program is only available with a German user interface at this moment.

After the start of the program you have to enter the IP-Address of the active display server. Click connect, thats all. Switch the tab and the display should be displayed. If not, change once the layer on the server.

The actual version does not support the display of pictures. Therefore it is important that the background color is set with a high contrast to the font color.
